VISION

Quality, lifelong education for all which is accessible, inclusive and relevant to individual, national and global needs and value systems

PREFACE

The **Lower Primary Education Syllabi** has been developed being cognisant of the need to provide a national age-appropriate curriculum for learners at Grade 1 to 3. The syllabi aim to provide quality education that is aligned with the **Competence-Based Curriculum** and 21st Century Skills. It also aims to impart the knowledge, skills, values and positive attitudes that are aimed at enabling children to live and grow into productive and useful members of their communities and the Zambian society.

The contributing learning areas to this syllabi are; **Literacy and Language, Mathematics and Science, and Creative and Technology Studies.**

This syllabi is interconnected to the Early Childhood Education and Upper Primary School syllabi. The content provided in this syllabi aim at facilitating the acquisition of knowledge, competences and values to nurture a learner who is creative, critical and an analytical thinker. The suggested learning activities are designed to offer learners hands-on and minds-on experiences through manipulation of real objects, interaction with nature and learning through play. Thus, the children will develop knowledge, desirable lifelong skills, values and positive attitudes needed for their personal and national development.

Cross cutting themes and emerging issues such as National Values and Principles, Life Skills and Health Education, Climate Change and Financial Education have been incorporated in the syllabus to ensure that children cultivate a mindset, skills, values and positive attitudes that prepare them to live responsible lives and be protected from life threatening vices.

It is hoped that the content provided in this syllabus will make learning at Lower Primary School level more meaningful and enjoyable as it is highly activity oriented and allow for a smooth transition into the Constructivist way of learning.

Joel Kamoko (Mr.)
Permanent Secretary- Educational Services
MINISTRY OF EDUCATION

ACKNOWLEDGEMENT

This **Lower Primary School Syllabi** incorporates three (3) learning areas namely: **Literacy and Language, Mathematics and Science** and **Creative and Technology Studies**. The syllabi is a build-up of topics introduced at ECE level in each of the learning areas herein.

Many thanks go to individuals, institutions and organizations that provided the technical and financial input to the successful development of these syllabi. These include Teachers, Teacher Unions, Lecturers from Colleges of Education and Public Universities in Zambia, experts from the various Directorates in the Ministry of Education, the Examinations Council of Zambia (ECZ), Non- Governmental Organisations (NGOs), and Cooperating Partners, Parliamentarians.

I also recognize the commitment and hard work of Staff at the Curriculum Development Centre in ensuring that this syllabus is responsive to individual and national aspirations.

Director- Curriculum Development

LOWER PRIMARY SYLLABI

INTRODUCTION

The **Lower Primary School Syllabi** have been developed by the need to provide a national curriculum. The syllabi aim to provide quality education that is aligned with the **Competence-Based Curriculum** and 21st Century Skills. It also aims to bring out learner Competences by imparting knowledge, skills, values and positive attitudes that are aimed at enabling children to live and grow into productive and useful members of their communities and the Zambian society.

The syllabi comprise three (3) learning areas namely;

1. **Literacy and Language** (incorporating English and Zambian Languages as independent subjects)
2. **Mathematics and Science**
3. **Creative and Technology Studies**

Each of these learning areas have integrated necessary content/topics from the contributing subjects. The learning areas provided at this level will later split into standalone subjects at Upper Primary; English Language, Zambian Language, Mathematics, Science, Social Studies, Technology Studies, Home Economics and Expressive Arts.

The content/topics provided in this syllabus are aimed at facilitating holistic development of learner's creativity, initiative, problem solving, physical, mental, emotional skills among others. The suggested activities are designed to offer children hands-on experiences through manipulation of real objects, interaction with nature and learning through practice. Thus, the children will acquire the Competences by developing knowledge, desirable lifelong skills, values and positive attitudes needed for their personal and national development.

Cross cutting themes and emerging issues such as Life Skills, Entrepreneurship, Climate Change and Financial Education have been integrated in the syllabi to ensure that children cultivate a mind-set, skills, values and positive attitudes that prepare them for sustainability and suitability in the labour market.

LITERACY AND LANGUAGE

A. ENGLISH LANGUAGE

INTRODUCTION

The **English Language Syllabus** for Lower Primary (Grades 1-3) is designed to help learners consolidate and develop the four language skills of *Listening, Speaking, Reading* and *Writing* introduced at Early Childhood Education level. The aim of this syllabus is to develop the necessary literacy skills and competences in English to facilitate learning across the curriculum. Learners will be taught sounds of English systematically, including short and long *vowels, consonants, digraphs, trigraphs, consonant blends, diphthongs, and triphthongs*. This sound knowledge will then be applied to developing the skills of blending known sounds together, reading and identifying known sounds in words and spelling. This enables learners to begin reading at an early stage of their schooling.

Handwriting, using the Marion Richardson style (*Print in Grade 1, tailed in 2, transitioning to cursive writing in Grade 3 term 1*), has been enhanced. It will be taught from Grade 1 – 3, emphasising the concept of print, letter formation, sizing, spacing, consistency, alignment and the correct use of punctuation.

Structure of the Syllabus

This syllabus is divided into three components: **Listening and Speaking, Reading and Writing**. Each of these components include a range of topics and corresponding sub-topics. To ensure a uniform and cohesive delivery of content, specific competences and their corresponding learning activities have been identified to facilitate effective learning. Additionally, a clear expected standard of performance serves as a benchmark for the desired level of proficiency and achievement. This structured approach ensures a consistent and organised learning experience for all learners at this level.

Suggested Teaching Methodology

The Ministry of Education has suggested methodologies as a guide to teachers. In saying this, teachers are encouraged to use the best practices for their own classes and context to enhance learning outcomes.

Listening and Speaking Lessons (*oral lessons*): The teaching method suggested in this syllabus for listening and speaking (Oral English) follows the three Ps' strategy – Present (The teacher will model the language for the day), Practice (Allow the learners to engage with the language in controlled practice activities), and Produce (Now allow the learners to use the language in communicative contexts independently). The strategy includes the use of various activities such as, role play, language games, songs, stories, rhymes, dialogue, conversation, and interactive games. Teachers are encouraged to use a **variety** of these activities to enhance the development of listening and speaking skills. They are also encouraged to trans language by code-switching, particularly in instances where learners are not exposed to English as their first language.

Reading and Writing Lessons: The lessons will address both reading and writing skills within a single lesson. These lessons will follow the phonics-based approach, focusing on **Phonemic Awareness, Phonics, Fluency, Vocabulary, Comprehension and Writing**. Writing skills such as **Handwriting and**

Punctuation will be emphasised during the writing portion of a lesson. During planning, teachers must ensure Listening and Speaking, Reading, and Writing components are included every week.

Time Allocation

Regarding time, 5 hours per week (*10 periods*) is dedicated to literacy and language in English at the lower primary level. Each period for a listening and speaking lesson is 30 minutes and a reading and writing lesson is 1 hour:

- Listening and Speaking Lessons -1 hour per week (*2 lessons of 30 minutes each*)
- Reading and Writing Lessons -4 hours per week (*4 lessons of one hour each*)

The separation of focus in the listening and speaking lessons and reading and writing is intended to provide ample practice for vocabulary in English and allow learners to engage in reading and writing activities for comprehensive language learning in English.

Assessment

Teachers play a crucial role in evaluating learners across all language skills: **Listening, Speaking, Reading, and Writing**, encompassing **Phonemic Awareness, Phonics, Fluency, Vocabulary, Grammar, Comprehension and Writing** relevant to each grade level. Additionally, **Handwriting** as an integrated skill is also a key component of assessment.

Assessment methods at this level vary and include formative, summative, and performance tasks. Formative assessments involve class discussions, observations of work and questioning to gauge ongoing progress and understanding. Summative assessments, such as end-of-term tests, provide a broader evaluation of accumulated learning over a period. Performance tasks offer learners opportunities to apply their language skills in real-life scenarios, showcasing their practical understanding and application.

This comprehensive approach ensures a thorough assessment of learners' language proficiency and skill development across different contexts and tasks.

ZAMBIAN LANGUAGES

B. ZAMBIAN LANGUAGES

INTRODUCTION

The focus of teaching Literacy and Language in *Zambian Languages* from Grade 1 to 3 is to develop the learners' basic reading and writing skills as well as to enhance their listening and speaking skills. Thus, the main components of the syllabus are:

- Listening and speaking
- Reading
- Vocabulary
- Comprehension
- Writing

These components will enhance the development of listening, speaking, reading and writing skills. The competences acquired at this level will prepare learners for learning at subsequent levels.

Although the components are presented separately in this syllabus, teachers are required to integrate them at lesson delivery. This entails that at preparation stage the syllabus should be broken down into schemes of work and weekly forecast which will contain these components – listening and speaking, reading, vocabulary, comprehension and writing.

Suggested Teaching Methodology

The teaching of Literacy and Language will follow Constructivist principles. This is where the teacher provides learners with experiences that allow them to hypothesise, predict, manipulate objects, pose questions, research, investigate, imagine, and invent. It will make use of systematic synthetic phonics, which involves the explicit teaching of the following key literacy skills; phonological and phonemic awareness, phonics, vocabulary, reading, comprehension and writing skills. In synthetic phonics, learners are taught letter sounds that they blend to be able to read as opposed to analytic phonics where learners are taught to recognise whole words by sight, and later to break down the word into the smaller units.

Generally, lesson delivery should follow the **Gradual Release Model (GRM)**, where the teacher starts by demonstrating the activity, then doing the activity with the learners and finally learners doing the activity independently. Furthermore, a variety of teaching techniques should be employed in order to meet different learning needs of learners.

Letter Sounds and Syllables

The teaching of sounds at Lower Primary School level will build on the content taught at ECE level. It will involve dealing with single sounds starting with vowels and single consonants, to form syllables. Single sounds will be followed by syllables formed by consonant clusters. Consonant clusters and digraphs should be handled as syllables and not as individual sounds.

This syllabus has also provided a sequence of sounds and syllables for each Zambian Language. The introduction of letters should be preceded by phonological and phonemic awareness.

Transition

This syllabus is designed to facilitate the transition of learners from ECE to Grade 1 level. However, it is cognisant of circumstances in which some learners will come to Grade 1 without going through ECE. How much time will be spent on pre-reading and pre-writing skills shall be dependent on the abilities of the learners in Grade 1. The teacher should consider reconciling the needs of those without ECE experience on the one hand and the abilities of those with ECE experience on the other.

Time Allocation

Literacy and Language in Zambian Languages at Lower Primary School level is allocated 5 hours per week. This translates into 10 periods of 30 minutes each in a week. Literacy lessons shall be executed in 1 hour, every day of the week. This implies that there will be a 1 hour Literacy lesson each day. Literacy lessons should also include handwriting.

Assessment

The learner assessment at this level shall follow the national Standardised Assessment (SAs) format, schedule and procedures as per policy prescription. The Standardised Assessment shall be conducted in Week 5 and Week 10 of every term. The Standardised Assessment for Literacy shall be based on the main components of the syllabus namely:

- Listening and speaking
- Phonological and Phonemic Awareness
- Reading
- Fluency
- Vocabulary
- Comprehension
- Writing

In addition to Standardised Assessment, other forms of assessments should be given by the teacher in order to inform the teaching and learning process.

MATHEMATICS AND SCIENCE

MATHEMATICS AND SCIENCE

INTRODUCTION

The Lower Primary **Mathematics and Science Syllabus** is designed for Grades 1 to 3, focusing on foundational concepts from Early Childhood Education (ECE). Mathematics and Science are two interconnected disciplines that shape our understanding of the world around us. Mathematics provides the language and tools to describe and analyse scientific phenomena, while science provides the context and application for mathematical concepts. It emphasises learners demonstrating competences fostering 21st-century skills like communication, critical thinking, and problem-solving. This syllabus prescribes mathematics and science as a single learning area and teaching of Mathematics and Science should be integrated. The course recognises individual potential and creates a dynamic environment for discovering Mathematics and Science. A Combination of these two components provides a solid foundation for Science, Technology, Engineering, and Mathematics (STEM) careers and preparing learners for a diverse range of careers.

Aims of the syllabus

This syllabus aims to enhance children's innate ability to learn scientific and mathematical concepts through engaging, effective learning experiences. It fosters curiosity through observation, questioning, and experimentation, preparing them for a smooth transition to Upper Primary Education and a solid foundation for STEM education.

The course covers the following five topics:

1. **Exploring My World:** "Exploring My World" is a comprehensive early learning package designed to foster curiosity, creativity, critical thinking and problem-solving skills in learners. Through interactive lessons, engaging learning activities, and hands-on experiences, learners can delve into various aspects of our world by grouping and counting things explored in the surroundings.
2. **Understanding my Body:** "Understanding My Body" is designed to introduce learners to the basics of human anatomy, health, and hygiene. It covers subtopics such as The Human Body and Water borne and Food borne diseases which involve naming and counting different body parts. Also, measuring and comparing lengths of different body parts.
3. **Exploring the Sky and Seasons:** "Exploring the Sky and Seasons" is a package to help learners to explore the fascinating world of astronomy and seasonal changes. It includes subtopics: Time and length, and weather and climate change which is meant to support learners delve into various aspects of the sky and seasons by telling time using activities of the day and weather changes in daily life. Also to explore different masses and capacity of things.
4. **Understanding Materials:** "Understanding Materials" is meant to help learners explore the properties, uses, and applications of different materials. It contains subtopics Materials, Energy, Sound, light, Soluble and Insoluble substances, Forces, Simple Machines, Shapes and Patterns, Safe water and Surroundings. These are meant to help learners explore the physical properties of different materials, such as texture, color, shape, and size. Also, identifying and making shapes and patterns using different materials and using clean and safe water from the surroundings.

- 5. Exploring Mixtures:** "Exploring Mixtures" is meant support learners to develop their understanding of mixtures. It has subtopics Addition, Subtraction, Multiplication and Division of things from the environment through experiments, and investigation to make and mix things. Also, these subtopics help learners on how to manage waste at household level.

Structure of the Syllabus

The syllabus has been outlined in such a manner that it integrates mathematics and science content in order to provide learners with a unique experience of appreciating the concepts that the two components endeavor to provide. The syllabus outlines the content in the form of topics, subtopics while the specific competences are meant to respond to the realization of the mathematics and scientific concepts.

The topics, sub-topics and competences are arranged in order for easy of reference. Some topics may be similar at both lower and upper sections, but the levels of knowledge, skills and values to be attained are not the same. Hence, when preparing lessons teachers should strive at building on what the learners already know.

Teaching Methodology

The approach to teaching and learning is learner-centred. Therefore, in order to develop learners with understanding, skills and values that can contribute to the development of society, the starting point for teaching and learning is to recognize that learners come to school with a wealth of knowledge and experience gained from the family, community and through interaction with the environment. Thus, learning in school must build on the learner's prior knowledge and experience. This is best achieved when learners are actively involved in the learning process through *hands on activities*. However, each learner has individual needs, pace of learning, experiences in life and abilities. To accommodate this, the teacher must determine the needs of the learners, and shape the learning experiences accordingly. This learning area, that enhances creativity, analysis, problem solving and an investigative approach, can be taught effectively using a variety of methods both in the classroom and outside. Therefore, teaching methods must be varied but flexible within well-structured sequences of lessons. These include, but not limited to conducting experiments, study tours, field work, presentations, practical work and project work. In order to foster collaboration, learners are encouraged to work in pairs, small groups as well as recognising individual efforts.

Time Allocation

The standard minimum learner-teacher contact time for Mathematics and Science at Lower Primary school level (Grades 1 to 3) is 5 hours per week, translating into ten (10) periods. The duration for a single period is 30 minutes.

Assessment

The assessment of the learning process is critical in teaching and learning. This will help teachers, parents and school administrators to find out the learners' ability to develop the desired competences. Learners should be assessed through exercises, observations, interviews, checklists, tests, projects, and examinations. School Based Assessment (SBA) will be used while keeping a portfolio for each learner as part of Continuous assessment.

KEY COMPETENCES TO BE DEVELOPED

S/N	COMPENTENCE	DESCRIPTORS
1.	Analytical Thinking	<ul style="list-style-type: none"> • Identify patterns • Compile data, create mental images and address issues • Evaluate solutions
2.	Communication	<ul style="list-style-type: none"> • Use appropriate mathematical and scientific language (verbal and non-verbal) in different situations • Express oneself using different media and symbols • Ask for feedback • Take turns when conversing with others
3.	Creativity and Innovation	<ul style="list-style-type: none"> • Observe the environment • Explore the objects around them. • Communicate one's ideas to others • Explore multiple ways of solving a problem. • Ask questions and answer questions • Establish relationships, patterns and make connections • Apply a set of skills that are appropriate for the creative process.
4.	Collaboration	<ul style="list-style-type: none"> • Solving puzzle in groups • Play with peers to build relationships • Participate in and express themselves through play activities • Complete shared tasks in pairs or groups e.g. sorting, matching.
5.	Critical Thinking	<ul style="list-style-type: none"> • Solve basic problems logically. • Ask the basic questions • Work in groups and engage in discussion • Make simple logical conclusions • Tell simple and short stories • Order items according to attributes • Recognise that one item is more than or less than another. • Solve simple real-life problem,

CREATIVE AND TECHNOLOGY STUDIES

CREATIVE AND TECHNOLOGY STUDIES

INTRODUCTION

Creative and Technology Studies (CTS) is an interdisciplinary field that combines creativity, technology and innovation to develop practical solutions. Hence this Syllabus is a combination of *Expressive Arts, Home Economics and Hospitality (HEH), Information and Communication Technology (ICT) and Technology Studies*. The learning area also includes some aspects of Social Studies and Cross-cutting issues such as financial education, entrepreneurship, environmental health and pollution management. This integration has been necessitated in order to provide learners with a unique experience of appreciating the concepts that the various learning areas endeavor to provide. This syllabus will help learners to apply critical thinking and creativity in order to meet various societal needs. The syllabus provides a platform on which learners acquire background knowledge on the various subject disciplines that learners will have to do at higher grade levels. It places emphasis on the development of practical skills and enhancement of talents, creativity, self-expression and sense of aesthetic. With this in mind, it is important that the subject is introduced to learners at a tender age as it is the best time learners have in exploring their surroundings; enjoy making, dismantling, examining and experimenting. The main thrust of this learning area is to provide an opportunity for learners to use available materials, put their capability to work and to develop products that meet their real needs and wants.

Structure of the Syllabus

The syllabus is divided into three grades: 1, 2 and 3. At the beginning of the syllabus, there are General Competences and descriptors that learners are expected to attain. For easy reference, the syllabus content is outlined in form of topic, sub-topic, specific competence, learning activities and an expected standard. Some topics may be similar at both lower and higher grade levels, but the levels of knowledge, skills and values to be attained are not the same. Hence, when preparing lessons teachers should strive at building on what the learners already know.

Suggested Teaching Methodology

The approach to teaching and learning is the learner-centred. Therefore, in order to develop learners with understanding, skills and values that can contribute to the development of society, the starting point for teaching and learning is to recognise that learners come to school with a wealth of knowledge and experience gained from the family, community and through interaction with the environment.

Thus, learning in school must build on the learner's prior knowledge and experiences. This is best achieved when learners are actively involved in the learning process. However, each learner has individual needs, pace of learning, experiences in life and abilities. To accommodate this, the teacher must determine the needs of the learners, and shape the learning experiences accordingly. Therefore, teaching methods must be varied but flexible within well-structured sequences of lessons and should include the following:

- Pair Work
- Group/Team Work
- Individual Work
- Field trip Method
- Project Method
- Discussion Method
- Guest Speaker
- Demonstration Method

The teacher should have reasons for choosing a particular teaching method and must employ strategies and techniques to make the lesson interesting.

Time Allocation

The standard period allocation for Creative and Technology Studies at Lower Primary School level has been prescribed in the Zambia Education Curriculum Framework (ZECF) of 2023. The minimum learner-teacher contact time from Grade 1 to 3 is **5 hours** per week, translating into **10 periods**. The duration for a single period is 30 minute

Assessment Overview

This syllabus recommends that two main types of assessment be undertaken. These are Continuous Assessment which is part of Formative Assessment including practical activities; and Summative Assessment will be conducted at the end of the learning process.

KEY COMPETENCES TO BE DEVELOPED

COMPETENCES	DESCRIPTORS
Collaboration	<ul style="list-style-type: none"> • Participate in and express themselves through creative arts
Analytical thinking	<ul style="list-style-type: none"> • Break down problems • Evaluate solutions • Apply analytical skills in various activities
